

Perfectly Balanced

With over 30 years of successful installations Dynamat® Xtreme® is the perfectly balanced automotive sound damping material.

Dynamat Xtreme is the highest efficiency sound deadening material available at 1.7mm thickness, and the most effective product for stopping noise and vibration. The powerful, extra sticky butyl layer is our proprietary formula for the most amazing energy conversion capabilities. The balance of these properties, along with the 100 micron aluminium constraining layer, make Dynamat the easiest to mould and adhere to your surface, yet light and thin enough to ensure an easy installation. All this together ensures an extremely effective sound deadening solution without adding too much mass. Even in extreme temperature conditions, Dynamat Xtreme will not fail with a rating from -54°C to +149°C. Also, Dynamat Xtreme is manufactured, packaged and shipped from our headquarters in the USA. Dynamat products are available globally through expert distributors, retailers and installers. These five key features– adhesion, thickness, effectiveness, ease of installation and American made – are designed to work together to create the perfectly balanced sound damping material. Remember, the Dynamat installed over 30 years ago is still working today. No other damping material can make that statement.

- ADHESION:** Super sticky butyl fuses for life
- THICKNESS:** Optimal performance at 1.7mm thin
- EFFECTIVENESS:** Highest efficiency patented formula
- EASY INSTALL:** Lightweight and contours perfectly
- MADE IN USA:** 100% produced and packaged in USA
